

# INSTALLATION INSTRUCTIONS

Attachment to the assembly instructions for the terrace board - floating aluminum construction

Mounting system for boards and terrace boards

### Arrangement of mounting elements

The figure below (Fig. 1) shows the arrangement of joists and brackets Gamrat WPC adjustable when mounted on a concrete slab or on the roof inverted. Arrangement of joists relative to each other from the joist edge is MAX 45 cm. In order to ensure the rigidity of the structure, the so-called "Frame". We install a transverse joist at the free ends of the joist. Transverse joists they are mounted using the system angle included in the set with self-drilling screws.

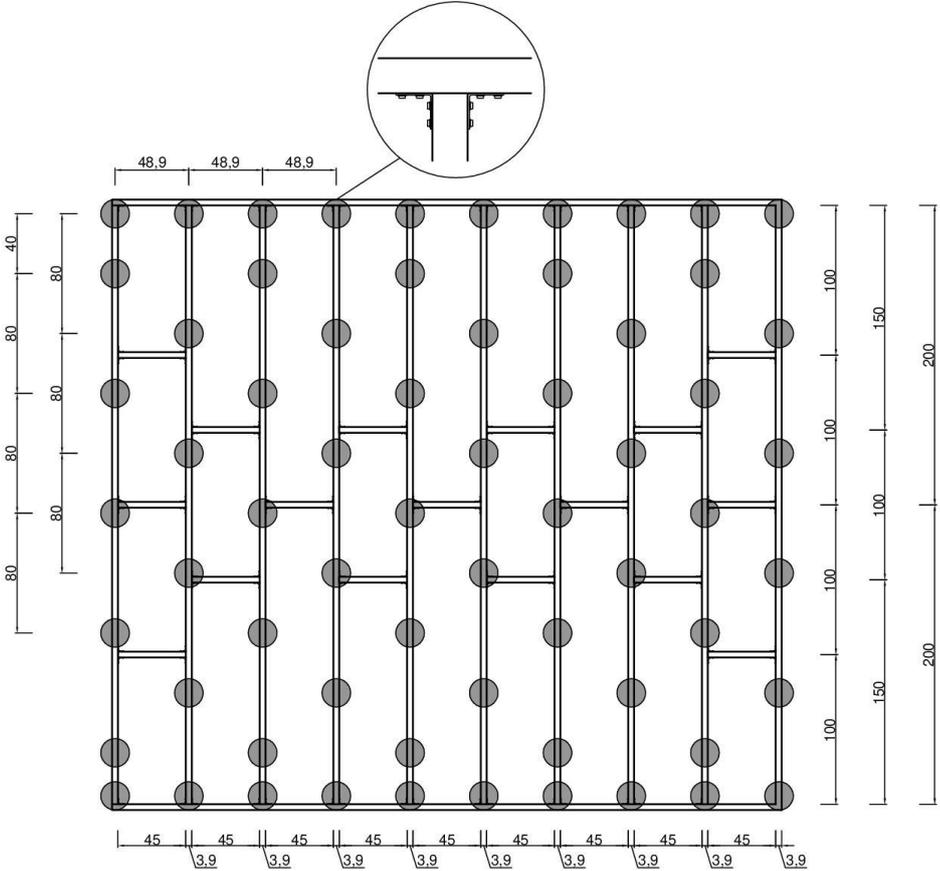

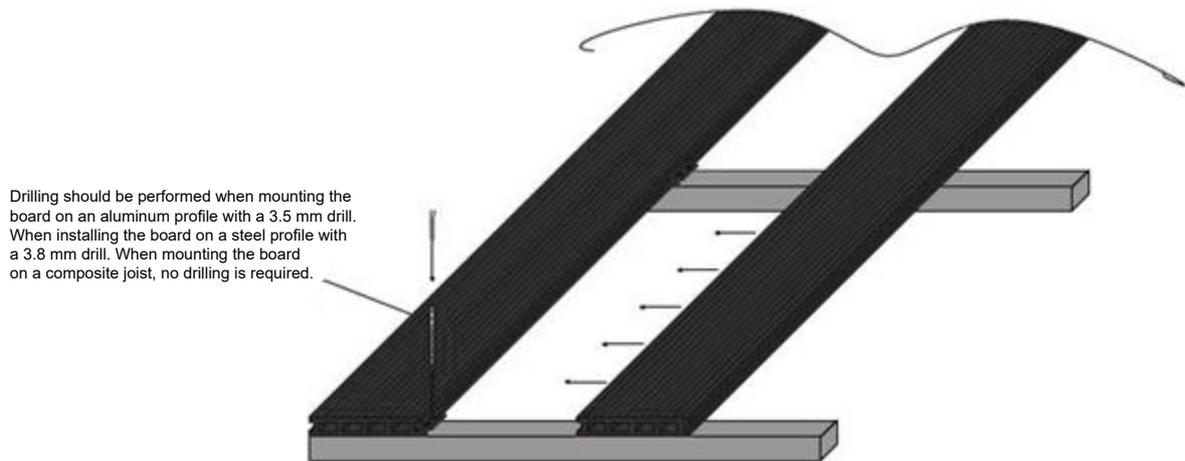

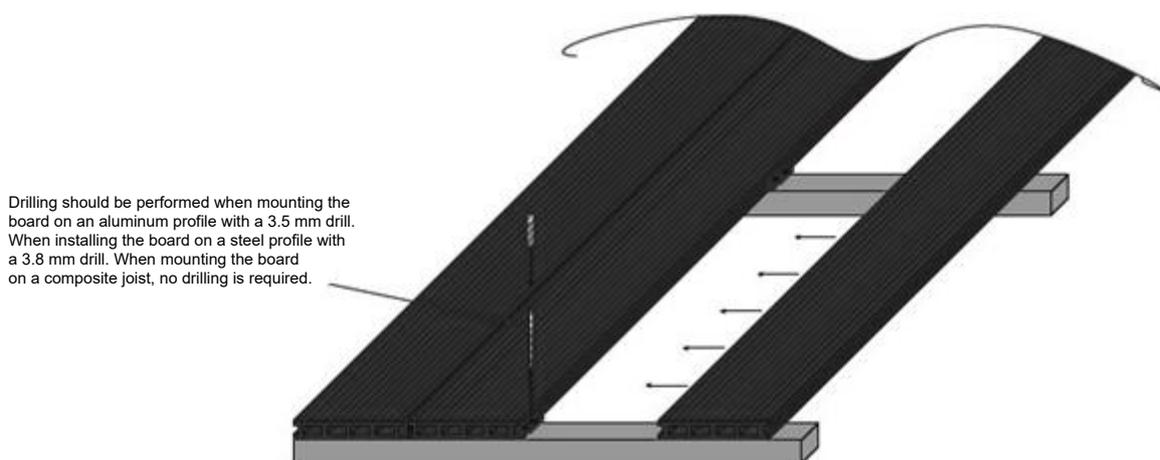

Fig. 1 Example arrangement of joists and adjustable brackets

## Assembly instructions for mounting clip 6 mm black.

*Fig. 4 Mounting the black clip*

1. We adjust the screw as shown, screw in the screw without tightening it completely,
2. We move another board and screw the screw not completely,
3. After moving the board and screwing the next clip, we tighten the previous clip TX20 key, without exaggerating the tightening force,
4. Repeat these steps, remembering to tighten the board before screwing next clip.

*Fig. 5 Installation of the black clip - continuation*

### **WARNING!**

Using a system joist with a screw channel, the clip is mounted without drilling first.
